

Technology, Globalization, and Sustainable Development

UAP 5784 (CRN 89423), Mondays, 9:00-11:45a, AA111

This graduate seminar will provide students with a **transdisciplinary perspective on sustainable development**. It is intended for **students interested in planning, policy, economics, business, innovation, environmental studies, and law**. The seminar will explore the many dimensions of sustainability and how national, multinational, and international political and legal mechanisms can be used to further sustainable development.

More specifically, we will consider the inter-relationship of global economic changes (including the emergence of new economics), employment, worker health and safety, and environment in the context of theories of development, trade, technical and organizational innovation, and employment. Mechanisms for resolving the apparent conflicts between these elements will be explored.

This seminar is intended to stimulate discussion and critical thinking of key writings related to sustainable development. Students will be evaluated on the basis of their mastery of the materials through (1) written assignments and (2) class participation and attendance. There will be no final examination.
